FX1	60-33500W		60-33500P
FX1, 2" shorter	60-33502W		60-33502P

## UMI KAWASAKI, POLARIS, YAMAHA HANDLEPOLES

UMI Racing's Billet Aluminum Handlepole is much stronger and lighter than any other handlepole on the market today. The interior of the handlepole is open inside for easy cable access. The pad mount brackets are wider, alleviating the steering cable from hitting the underside of the chin pad when using the quick steer setting on the UMI Steering System. Mounts to the stock handlepole bracket, using stock hardware. Fits the Yamaha Superjet '96-'03. Polaris Octane '02 and Kawasaki SXR800 '03 and up (must use SXR adaptor kit JS-08000-KIT).

### KAWASAKI SXR HANDLEPOLE KIT

Kawasaki SXR Handlepole kit includes the UMI Yamaha/Kawasaki mounting system, Kawasaki SXR Turnplate, Handlepole bushings and Steering cable bracket. This is everything needed to adapt the UMI aluminum handlepole to the Kawasaki SXR.

DESCRIPTION	PART #
Standard handlepole - black	30-YA-06016-BLK
Standard handlepole - bare aluminum	30-YA-06016-CLR
-2" handlepole - black	30-YA-09012-BLK
-2" handlepole - bare aluminum	30-YA-09013-CLR
Handlepole limiting rope	30-YA-09100
SXR handlepole adaptor kit	30-JS-08000-KIT

## HANDLEPOLE BUSHINGS

AC Racing handlepoles only.

DESCRIPTION	PART #
AC Racing Handlepole Bushings	60-33300

## HANDLEPOLE SPRING TENSIONERS

Reduce the weight of your handlepole by up to 50% on your Kawasaki 750 SX/SXi, and 800 SXR. The handlepole will feel lighter and produce a more comfortable ride. Easy installation.

## UMI STEERING SYSTEMS

Replace your OEM steering system and eliminate all the looseness associated with factory steering systems. Machined from billet 6061-T6 aluminum. UMI's system is shorter to allow the rider to move forward. Steering shaft rides in sealed bearings rather than plastic bushings.

## SSP POWER STEERING

New SSP Billet Sealed Bearing Turn Plate manufactured for the Kawasaki 800SX-R, SXi Pro, SXi, and SX. The all new sealed bearing turn plate design is CNC machined from 6061-T1 billet aluminum utilizing sealed bearings, thrust bearings, thrust races, and manufactured top and lower races. The design allows for adequate torque to ensure the turn-plate makes positive contact with the OEM sub plate. The sealed bearing design minimizes maintenance, provides a long lasting, free turning, connection to the handle pole's sub plate, giving the driver a positive connection to the watercraft since there is no more sloppiness in the steering system. Two-point adjustable pivot position allows for increased turning radius. Plate is used with your OEM/Stock Kawasaki handle pole and sub plate. This plate is excellent for racers, or weekend warriors who expect the most out of their equipment. Manufactured in the USA.
